

Multi-Cables for Entertainment

Featuring a unique reverse planetary lay, paper tape slipping agent and technologies from the robotics industry, Dura-Flex multi-cables and assemblies have changed the face of the entertainment industry.

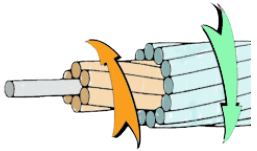

Features and benefits:

Premium grade proprietary PVC compounds for rugged flexibility in demanding stage environments, including excellent cold weather handling.

Paper tape slipping agent reduces friction between jacket and conductors and unlike talc it does not settle out over time or present a health concern.

Reverse planetary laid construction to eliminate cable memory and increase flexibility.

Jacket print legend includes **Running length marked every foot** allowing for easy confirmation of cable length.

Ratings:

1000V Rating - Dura-Flex is proud to offer the industry's first 1000V rated multi-cable. This passive safety feature provides an additional degree of user protection against electrical hazards.

Flexibility
FL-02
High flexibility with continuous flexing attributes and unmatched cycle life.

Mechanical Resistance
UL 1277
Lab tested for crush and impact resistance.

Flame Resistance
UL 1581, CSA FT4
Vertical Tray test exposed to flame for twenty minutes, damage cannot exceed 5 feet

Oil Resistance
UL Oil Res. I
C22.2 No.230
In oil for 4 days @100°C
50% Unaged Tensile strength
50% Unaged Elongation

Temperature
UL 105°C
Working temperature range -20°C to 105°C (-4°F to 221°F).

Environmental
Dura-Flex products are 100% lead free and meet or exceed **RoHS** and **REACH** regulations.
